Katie provided a summary of the performance of the Hamilton Works coke battery operations under the Site-Specific Standard Order for particulates for the period June 1 – Sept. 23, 2017. ## **Hamilton Works – Environmental Management System**

Andy provided an overview of the facility's Environmental Management System (EMS) which has been evaluated by a third party auditor for recertification under the new ISO 14001 standard earlier this year. Andy highlighted key elements of the EMS and key enhancements in the new ISO 14001 standard. A general observation from a committee member is that the new ISO 14001 standard seems to be designed to support and empower employees at all levels within an organization to assess environmental improvement opportunities.
