

**U. S. Steel Canada - Hamilton Works  
Environmental Management System and Community Engagement Report  
July 2 – December 31, 2015**

On March 27, 2015, Hamilton Works received a Site-Specific Standard Approval for suspended particulate matter from the Ministry of Environment and Climate Change (MOECC) (Approval No. 203-15-rv0). As a part of this Site-Specific Standard Approval, the MOECC issued a related Order (Order No. 203-15-order-rvo) which set visible emission limits for coke plant doors, lids, offtakes and charging.

This Environmental Management System and Community Engagement Report summarizes information as required per Item 3.20.2. of the Order covering the period July 2 to December 31, 2015.

A summary of the information required by Item 3.3 with respect to the notice(s) required to be given.

Hamilton Works complied with the daily 30-day rolling average visible emission limits. Therefore no notification was required to be submitted to the MOECC District Manager.

A summary of the information required by paragraph 6 of Item 3.9 with respect to the record(s) required to be made.

There were no exceedances of the daily limits for coke battery doors, lids and offtakes. Therefore no operational adjustments were required.

A summary of the information required by paragraph 7 of Item 3.14 with respect to the record(s) required to be made.

One operational adjustment was made when a daily average pushing emissions opacity was determined to be 50%. The adjustment focused on reviewing coking time, battery temperature, and baghouse conditions. Battery flues were also cleaned.

The minutes of the CLC meetings and any related follow-up actions.

The minutes of the 2015 CLC meetings can be retrieved from U. S. Steel Canada's website at:
